

Membrane Filtration

BECO® MEMBRAN PS Wine

Membrane Filter Cartridges

BECO MEMBRAN PS Wine filter cartridges are designed for reliable removal of spoilage microorganisms of wine and sparkling wine.

They perfectly combine long service life with the full maintenance of valuable flavor and color of wines.

Features and Benefits

- The asymmetric polyethersulfone membrane provides high microbiological retention and can be integrity tested
- The high filter area and asymmetric membrane structure of polyethersulfone offers exceptionally high flow rates and outstanding service life
- The special design allows for 72.5 psi (5 bar) differential pressure in the direction of flow and 29 psi (2 bar) differential pressure in reverse to support a long service life
- The high thermal stability allows more than 100 steam sterilization cycles
- Available in 0.45 and 0.65 µm, code 2 and 7 and length of 20" (500 mm) and 30" (750 mm). For other dimensions and retention ratings it can be perfectly complemented by BECO MEMBRAN PS Pure Range
- Full maintenance of valuable flavor and color in wines
- Eaton can suggest the most economical configuration of pre and final filter

Configuration

BECO MEMBRAN PS Wine filter cartridges are made of high-quality polyethersulfone membranes.

Polypropylene support fleeces protect the membrane and provides wide chemical compatibility, while the polypropylene cage and core help to ensure maximum mechanical stability.

Sterilization

Steam Sterilization

With steam at 221°F (105 °C)/7.25 psig (50 kPa, 0.5 bar).

Duration: 30 minutes after steam emerges from all openings of the filtration system.

Hot Water Sanitization

Using water up to 194 °F (90 °C) max.

Duration: at least 30 minutes once the temperature reaches 185 °F (85 °C) from all openings of the filtration system. Soften and filter (ca. 1 µm) the water to avoid lime precipitation that could lead to premature clogging of the filter cartridge.

Regeneration

Rinse BECO MEMBRAN PS Wine filter cartridges after each use in the direction of flow using approximately 1 µm of filtered, softened water under counter pressure. Rinsing will primarily remove any deposited, water-soluble haze substances such as polysaccharides (glucanes), proteins, tannins, tartaric acid crystals. Rinsing with hot water (176 °F/80 °C) will typically remove persistent residues, if used in a timely manner. The hot water may remain in the filter overnight.

Note: Detailed information on regeneration and chemical cleaning can be found in Application Note 1 A 4.3.5.1
