Class 150

Strainers provide economical protection for costly pumps, meters, valves, and other similar mechanical equipment by straining foreign matter from the connected piping system. Installation of a strainer before mechanical equipment can ensure trouble free service and avoid costly shutdowns for repair or replacement of equipment damaged by foreign matter.

Typical Service

These strainers are used extensively to protect displacement water meters and other sensitive fluid monitoring devices.

Features

- Compact design with short face-to-face dimensions allow for installation where spaces are extremely limited
- AWWA requires an effective straining area of at least twice that of the main meter case inlets of turbine type meters. These have been rigorously designed to meet this AWWA requirement.
- Minimum 2 to 1 Open Area Ratio per AWWA requirements.
